HTML, CSS and JavaScript
- [Sololearn] • [From (10/2022) To (11/2022)].

Professional Summary

As student, I made a project on the Employee Attendance System (ERP), and I used these techniques during the project:
1-Front-end Developer using: HTML, CSS, JavaScript, Bootstrap, React.js and I worked during this period on some other projects in which I used these mentioned languages such as: GYM Store, Music Store and some other projects.
2- Back-end Developer using: SQL Server Database and dot.net C In fact, my colleague in the project helped me connect the databases to the project because my experience in backend in this period was average. But I love the front-end path, so I developed myself on it.
3-system analyses I also used these charts:
Scenario Diagram, Use Cases Diagram, Flowchart Diagram, DFD Diagram, Context Diagram, Activity Diagram and ERD Diagram & Schema.

Work Experience

From 12-10-2020 to 16-5-2021
